Plus, it can be opened without administrative privileges on the target computer. Since it doesn't write entries in your Windows registry, you can get rid of it by simply deleting the files that you have grabbed from the Internet. Look for the app in the system tray Snipping Tool++ resides quietly in the system without interfering with your work. Right-clicking on its icon reveals a set of features placed at your fingertips, namely open up the configuration panel, upload and view screenshots, as well as take screenshots. Take snapshots and edit them The application offers you the option to take screenshots using only two modes: full screen or a user-defined selection of the desktop. A small magnifying panel is displayed each time you define the region of the screen that you want to capture. Snapshots can be taken using hotkeys or accessing the functions via the system tray icon. The built-in editor delivers a clean and intuitive layout. It only works with the captured photos so you cannot import custom pictures from your disk and alter them. Snipping Tool++ lets you add a personal touch to your snapshots using a pencil for creating freehand designs, drawing lines, rectangle wire frames, filled and bordered rectangles, blurring selected areas from an image, as well as embedding custom text messages. In addition, you may adjust the opacity level and stroke size of the editing tools. Image viewer and cloud history The application includes an image viewer that keeps a history with all screenshots and lets you copy the selected picture to the clipboard, open the folder where the photo is stored, as well as download your upload history from the cloud to any computer by registering a keyset. Uploading and saving options Screenshots can be uploaded to Imgur or saved to a file on your computer. Snipping Tool++ is able to automatically generate an Imgur link and a deletion URL that can be used for removing items from Imgur. You can use the Multi Image Upload
